Hi Ashley and Sara,

I am working on my porting of the User Sentiment Project, and I wanted to get your input on what you would like to see

on how data is loaded -- how would you like the website to know what data to use?

You can have a button to load a file with certain user sentiment (like an excel or CVS file) or the program could automatically load files placed in a certain directory, etc. Just let me know what you would like to see.

Thanks,

Afternoon Olaf,

Hmm...good question. I think right now as we are figuring things out on the City's side in terms of what data we will be using, a button to load a certain file can work. In the future I would prefer it to automatically load files in a certain directory, but we just are not quite there yet.

Thanks! If you have some follow-up questions or have any others just let us know.

Thanks again,
Ashley

Hi Ashley,

Great. We'll initially have it with a button, and it should be fairly easy to change for future use.

Have a great weekend,

Wonderful, thanks Olaf that sounds perfect. You all have a great weekend as well.

Thanks,
Ashley

Hello, I'm working on the data representation map of Austin, but the data you've given us has no location data. Right now I've got random locations in, would it be possible to get location data with the social media posts?

Hey Blake,

So glad to hear you are incorporating a map of the data; although be it right now made up locations. But I'll take it.

I am trying to dig into the source of the data to see if I can get locations that you can use. I wish it was straight forward but unfortunately it's not. I'm going to work with Ted to see how best we can make this happen.

For now keep doing what you're doing. Hopefully I can get you some real locations to use soon, but if not the prototype map you have will work.

Thanks so much,
Ashley

Hello, I've identified another issue with our sample data, not sure why this is happening but many URLs looks similar to this:

swarmapp.com/somename/châ€

Hi Blake,

Thank you for sending this along to get feedback. We like the way it's shaping up – particularly the heat element on the map. Did you mean to also include screenshots of the database or are you still refining? Here are a few suggested changes that we think would improve it and some questions we have...

Screenshot 1

1. On the landing page, add space for a welcome and brief introduction
2. Rename "Map of Austin" to "Location of Comments"
3. Rename "Database" to "Summary of Comments"

Screenshot 3

1. Alter presentation so that comment is easier to read and does not contain extraneous information. For instance, the Lat Long is not nec. here, but more appropriate for database
2. Change "header of tag" to "Comment"
3. Separate out the 'statement' into pieces of info:
 - Commenter
 - Recipient
 - Comment
 - Tags

Please feel free to shoot us any additional screenshots or questions!

Ashley and Sara

Hey Blake,

Is the issue the weird character that occurs at the end? If so, does that happen to appear after you pull it from the original data-set and into the web interface?

Thanks,
Ashley

We don't have anything ready for the "database page" quite yet, we'll take your suggestions into account though.
Thanks,
Blake

Ah-ha, since it must have happened during the export let's not worry about it for now. Looks like I need to look into the data quality. Thanks for bringing it to our attention!

Here's a short video showing all of the current functionality.

Give us some feedback. :)

Note that on Summary of Contents Page, "Unknown" Will be changed to "Neutral"

Love,

Blake Bordovsky

Blake,

My apologies for the delay in getting back to you. Some hard deadlines and the Thanksgiving holiday got in the way.

This is great! I like that you are already changing the "Unknown" to "Neutral".

On the Graph tab, when you click on the 'Positive' block on the bottom stacked line and you come to the lots of blocks for positive: 1) What does the gradation of color mean? If there is meaning behind it can you add a legend, 2) Can you click on one of the blocks and bring up the details of that comment?

Question on functionality, is there a way we can group the comments into categories, such as Mobility, Quality of Life, Parks, etc? I know this could be a lot of work so perhaps it can be a phase 2 for the next class, but just want to check to see if it is a possibility.

I forwarded this onto my colleague Sara who may have some more feedback for you but want to provide mine before this week slips by.

Again, amazing work by you and your team. Thanks so much!

-Ashley
